

Example GCN graph attributions: red/blue halos show signed atom effects

a

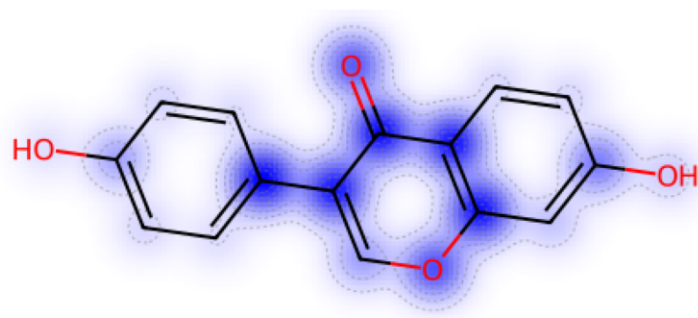

sulfur-rich / sulfone
solvent=ethyl acetate; pred=-3.07, y=-3.19

b

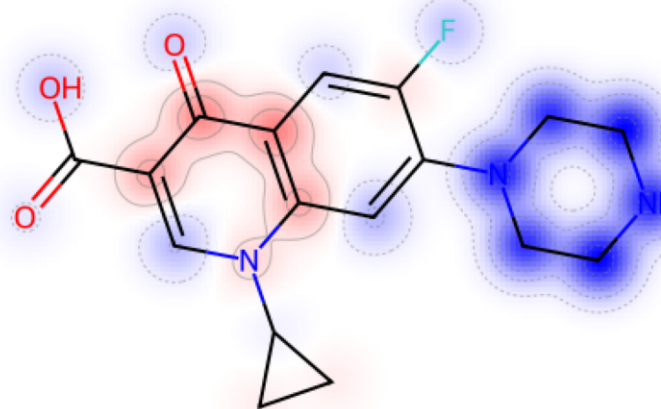

carboxylic acid
solvent=ethyl acetate; pred=-3.96, y=-4.74

c

phenol / aromatic OH
solvent=chloroform; pred=-3.47, y=-4.77

d

piperazine / diamine
solvent=acetone; pred=-3.56, y=-3.90

signed atom occlusion contribution to predicted logS (red raises, blue lowers; clipped at selected 95th percentile)
